

Solutions: Prevent or Reverse “Smart” Meter Installation

THE NOTICE OF LIABILITY PROCESS

Q: What is the Notice of Liability (NOL) process?

“By protecting our individual rights, we are protecting all life.”

A: The NOL process is a mass-action of people protecting their rights and enforcing liability for the various harms caused by “smart” meters (as outlined in *Take Back Your Power*). It is a **powerful lawful remedy** for individuals and groups to place liability onto those responsible or complicit with the “smart” meter agenda. It is a comprehensive 3-part process, based upon sending a series of Notices - pre-written templates customized for each participant.

Over the past several years, smart meters have been rolled out throughout North America. We've seen other traditional legal approaches, complaints and appeals fail to achieve success thus far. There appears to be an enormous level of systemic corruption and collusion involved, and those causing the harm have - so far - simply ignored complaints. In contrast, the NOL process enables participants to access and reclaim their full unalienable rights, and **uses the corporate system's own rules against them** to enforce both corporate and individual liability.

In essence, utilities are changing the terms of their service contracts with each customer, without the disclosure of facts. They are also using “*implied consent*”, to assume everyone agrees. What the NOL does is recognize that a utility's desire to install a “smart” meter is a *contractual offer*, for which, in a written Notice, we *conditionally accept* if they can disprove our affidavit (a document we verify as true), point-by-point, in an affidavit of their own. If they cannot do so, our affidavit and terms stand, and each Respondent* is individually subject to our terms. **These terms include a fee schedule of a dollar amount of your choosing**, per day that they are in violation of your terms. Respondents are unable to disprove the statements made in the NOL or the facts used in the affidavit.

The NOL process implements Contract Law, Common Law, Commercial Law (Uniform Commercial Code) and Law Merchant. It is multi-faceted and operates in multiple jurisdictions. The NOL is based upon a higher level of understanding of how the systems of commerce and social control have been created and currently operate.

* - **Respondents** are utility executives and government officials who are not yet openly opposing the “smart” meter agenda.

Q: What are the results so far?

A: Kelowna Safe Meters is one of several groups in North America who is using this new process. More than 200 individuals are participating at this early stage. The early results, **though still speculative**, appear to indicate a correlation between the liability being enforced and several Respondents stepping down or not seeking re-election.

As an example, on January 30, 2015, **Corix CEO Brett Hodson** received more than 100 Notices of Liability (“round 1”) and or Notices of Fault (“round 2”) from participants in Kelowna. On February 4, his resignation was internally announced, and covered in the media on February 6.

In November 2014, eight **Seattle City Councilmembers** received Notice of Default (“round 3”) from 20 participants in Seattle, contractually agreeing to \$2.6M per month of liability. Between January 21 and February 18, three of these eight announced they are not seeking re-election. Two of these, according to insiders, were entirely unexpected.

These indications are consistent with results of an individual application of the NOL process previous to “smart” meters, in which more than a dozen public officials stepped down from the provincial to federal levels.

Note: When a Respondent leaves office, the liability remains attached to both their office and them as an individual.

FOR MORE INFO OR TO PARTICIPATE IN THIS PROCESS:

Cost is \$40 per round, including having us do all the mailing for you. Contact **KelownaSafeMeters@openmailbox.org**. If you want to sign up: include your full name, phone, home address, gender (man/woman), utility name, and indicate if you have a preference for any specific public officials whom you would like to hold liable.

OTHER RESOURCES:

- * Meter rings (\$17, brass)
- * Meter locks (\$30, steel)
- * Take Back Your Power DVDs (\$20)
- * Cornet Electrosmog Testers (\$180 incl ship)
